

CLAIMS

This listing of the claims replaces all prior versions, and listings of the claims in the application:

Claim 1 (Canceled)

Claim 2 (Previously presented)

A headgear for a patient interface device comprising:

a headpiece; and

a connecting strap attached to the headpiece and adapted for releasably connecting the headgear to the patient interface device,

wherein the headpiece comprises:

contoured panels, each panel including an upper edge having a length and a lower edge having a length, the length of the upper edge is shorter than the length of the lower edge;

a rear joining piece positionable along a rear portion of a patient's head; and

a front joining piece positionable along a front portion of such a patient's head, wherein each of the contoured panels extend from the rear joining piece to the front joining piece.

Claim 3 (Original)

The headgear of claim 2, wherein the connecting strap is an upper connecting strap attached to the front joining piece and adapted to releasably connect the headgear to the patient interface device.

Claim 4 (Original)

The headgear of claim 3, further comprising a lower connecting strap attached to the rear joining piece and adapted to releasably connect the headgear to the patient interface device.

Claim 5 (Original)

The headgear of claim 4, wherein the upper and the lower connecting straps include hook and loop components for adjustably connecting the headgear to the patient interface device.

Claim 6 (Original)

The headgear of claim 5, wherein the upper and lower connecting straps include a loop fastener portion on the exterior thereof and an end portion having a hook tab portion, wherein each hook tab portion is adapted for threading through a connecting element of the patient interface device and securing to the loop fastener portion.

Claim 7 (Previously presented)

The headgear of claim 2, further comprising a crossover strap extending from one of the contoured panels to another contoured panel.

Claim 8 (Previously presented)

The headgear of claim 7, wherein the crossover strap includes hook and loop components for adjustably connecting the crossover.

Claim 9 (Previously presented)

The headgear of claim 2, wherein each of the contoured panels has an arch-shape having an upper edge having a concave curvature and a lower edge having a convex curvature.

Claim 10 (Previously presented)

The headgear of claim 2, wherein the headpiece is formed from an elastomeric material.

Claim 11 (Previously presented)

The headgear of claim 2, further comprising a stabilizer attached to the headpiece and adapted to stabilize a conduit connected to the patient interface device.

Claim 12 (Canceled)

Claim 13 (Previously presented)

A headgear and patient interface device comprising:

- 1) a patient interface device adapted to fit over a portion of the face of a patient and having a connector element; and
- 2) a headgear comprising:

a) a headpiece; and

b) a connecting strap attached to the headpiece and adapted to releasably connect the headgear to the connector element;

wherein the headpiece comprises:

contoured panels, each panel including an upper edge having a length and a lower edge having a length, the length of the upper edge is shorter than the length of the lower edge;

a rear joining piece positionable along a rear portion of a patient's head; and

a front joining piece positionable along a front portion of such a patient's head, wherein each of the contoured panels extend from the rear joining piece to the front joining piece.

Claim 14 (Original)

The headgear and patient interface device of claim 13, wherein the connecting strap is an upper connecting strap attached to the front joining piece and adapted to releasably connect the headgear to the patient interface device.

Claim 15 (Original)

The headgear and patient interface device of claim 14, further comprising a lower connecting strap attached to the rear joining piece and adapted to releasably connect the headgear to the patient interface device.

Claim 16 (Original)

The headgear and patient interface device of claim 15, wherein the upper and the lower connecting straps include hook and loop components for adjustably connecting the headgear to the patient interface device.

Claim 17 (Original)

The headgear and patient interface device of claim 16, wherein the upper and the lower connecting straps include a loop fastener portion on the exterior thereof and an end portion having a hook tab portion, and wherein each hook tab portion is threaded through the connecting element of the patient interface device and secured to the loop fastener portion.

Claim 18 (Previously presented)

The headgear and patient interface device of claim 13, further comprising a crossover strap extending from one of the contoured panels to another contoured panel.

Claim 19 (Previously presented)

The headgear and patient interface device of claim 18, wherein the crossover strap includes hook and loop components for adjustably connecting the crossover strap.

Claim 20 (Previously presented)

The headgear and patient interface device of claim 13, wherein each of the first and the second contoured panels has an arch-shape having an upper edge having a concave curvature and a lower edge having a convex curvature.

Claim 21 (Previously presented)

The headgear and patient interface device of claim 13, wherein the headpiece is formed from an elastomeric material.

Claim 22 (Previously presented)

The headgear and patient interface device of claim 13, further comprising a stabilizer attached to the headpiece and adapted to stabilize a conduit connected to the patient interface device.

Claim 23 (Previously presented)

The headgear and patient interface device of claim 13, wherein the patient interface device is a nasal mask, a nasal/oral mask, or a full face mask.

Claim 24 (Canceled)

Claim 25 (Previously presented)

A system for delivering a breathing gas to a patient comprising:

- 1) a gas flow generating device that produces a flow of gas;
- 2) a conduit having a first end portion operatively coupled to the gas flow generating device and a second end portion, wherein the conduit carries the flow of gas from the gas flow generating device during operation of the system;
- 3) a patient interface device coupled to the second end portion of the conduit, the patient interface device having a connector element; and
- 4) a headgear comprising:
 - a) a headpiece; and
 - b) a connecting strap attached to the headpiece and adapted to releasably connect the headgear to the connector element;

wherein the headpiece comprises:

 - a rear joining piece positionable along a rear portion of a patient's head;
 - a front joining piece positionable along a front portion of such a patient's head; and
 - a first contoured panel and a second contoured panel, wherein each of the first and the second contoured panels extend from the rear joining piece to the front joining piece, each of the first and second contoured panels including an upper edge having a length and a lower edge having a length, the length of the upper edge is shorter than the length of the lower edge.

Claim 26 (Original)

The system of claim 25, wherein the connecting strap is an upper connecting strap attached to the front joining piece adapted to releasably connect the headgear to the patient interface device.

Claim 27 (Original)

The system of claim 26, further comprising a lower connecting strap attached to the rear joining piece and adapted to releasably connect the headgear to the patient interface device.

Claim 28 (Original)

The system of claim 27, wherein the upper and the lower connecting straps include hook and loop components for adjustably connecting the headgear to the patient interface device.

Claim 29 (Original)

The system of claim 28, wherein the upper and the lower connecting straps include a loop fastener portion on the exterior thereof and an end portion having a hook tab portion, and wherein each hook tab portion is threaded through the connecting element of the patient interface device and secured to the loop fastener portion.

Claim 30 (Previously presented)

The system of claim 25, further comprising a crossover strap extending from one of contoured panels to another contoured panel.

Claim 31 (Previously presented)

The system of claim 30, wherein the crossover strap includes hook and loop components for adjustably connecting the crossover strap.

Claim 32 (Canceled)

Claim 33 (Previously presented)

The system of claim 25, wherein the headpiece is formed from an elastomeric material.

Claim 34 (Previously presented)

The system of claim 25, further comprising a stabilizer attached to the headpiece and adapted to stabilize a conduit connected to the patient interface device.

Claim 35 (Previously presented)

The system of claim 25, wherein the patient interface device is a nasal mask, a nasal/oral mask, or a full face mask.

Claim 36 (Previously presented)

A headgear for a patient interface device comprising:

a headpiece having:

a substantially frusto-conical shape defined by a first contoured panel and a second contoured panel, wherein each of the first and the second contoured panels extend from the rear joining piece to the front joining piece,

a rear joining piece positionable along a rear portion of a patient's head, and

a front joining piece positionable along a front portion of such a patient's head;

a connecting strap attached to the headpiece and adapted for releasably connecting the headgear to such a patient interface device; and

a crossover strap extending from one of the first or the second contoured panel to a remaining other one of the first or the second contoured panel.

Claim 37 (Previously presented)

The headgear of claim 36, wherein the crossover strap includes hook and loop components for adjustably connecting the crossover strap to the first or the second contoured panel.

Claim 38 (Previously presented)

A headgear and patient interface device comprising:

- 1) a patient interface device adapted to fit over a portion of the face of a patient and having a connector element; and
- 2) a headgear comprising:
 - a) a headpiece having:
 - a substantially frusto-conical shape defined by a first contoured panel and a second contoured panel, wherein each of the first and the second contoured panels extend from the rear joining piece to the front joining piece,
 - a rear joining piece positionable along a rear portion of a patient's head, and
 - a front joining piece positionable along a front portion of such a patient's head,
 - b) a connecting strap attached to the headpiece and adapted to releasably connect the headgear to the connector element, and
 - c) a crossover strap extending from one of the first or the second contoured panel to a remaining other one of the first or the second contoured panel.

Claim 39 (Previously presented)

The headgear and patient interface device of claim 38, wherein the crossover strap includes hook and loop components for adjustably connecting the crossover strap to the first or the second contoured panel.

Claim 40 (Previously presented)

A system for delivering a breathing gas to a patient comprising:

- 1) a gas flow generating device that produces a flow of gas;
- 2) a conduit having a first end portion operatively coupled to the gas flow generating device and a second end portion, wherein the conduit carries the flow of gas from the gas flow generating device during operation of the system;
- 3) a patient interface device coupled to the second end portion of the conduit, the patient interface device having a connector element;
- 4) a headgear comprising:
 - a) a headpiece having a substantially frusto-conical shape defined by a first contoured panel and a second contoured panel, wherein each of the first and the second contoured panels extend from the rear joining piece to the front joining piece, and
 - b) a rear joining piece positionable along a rear portion of a patient's head, and
 - c) a front joining piece positionable along a front portion of such a patient's head,
- 5) a connecting strap attached to the headpiece and adapted to releasably connect the headgear to the connector element; and
- 6) a crossover strap extending from one of the first or the second contoured panel to a remaining other one of the first or the second contoured panel.

Claim 41 (Previously presented)

The system of claim 40, wherein the crossover strap includes hook and loop components for adjustably connecting the crossover strap to the first or the second contoured panel.
